The human life alternates between the great, external macrocosm and the invisible inner microcosm. Steiner discusses the various paths of self-development that lead across these two thresholds and to the transformation of human soul-forces into spiritual organs of perception. A brief synopsis: The world behind the tapestry of sensory perceptions; human life between macrocosm and microcosm. The planets and their connection with our sleeping and waking life; consciousness soul, mind soul, and sentient soul. The inner path of the mystic; the cycle of the year; the ability to see through matter; the "greater guardian of the threshold." The nature and development of human soul faculties; the "lesser guardian of the threshold"; the sun at midnight; the results of "sins of omission." The Egyptian mysteries of Osiris and Isis; initiation experiences; the Rosicrucian path; mystics of the Middle Ages. Initiation in the "northern mysteries"; the necessity of suppressing the ego; conscious ascent into the macrocosm and the higher worlds; the world of archetypal images. The four spheres of the higher worlds; the threshold of the spirit world; forces for developing clairvoyant consciousness in the world of archetypal images. The macrocosm mirrored in the human being; the nervous system as an inner solar system; the image of purified blood and the conquest of our lower nature in the symbol of the Rose Cross. Spiritual organs of perception and the strengthening powers of sleep; the thinking of the heart; the ego viewed from twelve perspectives. Reading the akashic record; the transition from intellect to heart thinking; four-dimensional space; intellectual questions have no meaning in relation to conditions before the intellect itself existed. Human and planetary evolution; adaptation to the different states of Earth's existence; the breathing process should not be influenced directly unless knowledge has become prayer. A young man is in his freshman year at college. It's the first month of college, and he hooks up with his old friend from back home to go to a party. His friend Jason is in his final year at the college, and he has been openly gay the past couple of years. Michael knows this, but he himself is battling with his own sexuality. As most of Jason's friends are gay, there are a lot of gay people at the party when they show up. Michael feels a bit uncomfortable and freaks out when a guy comes on to him. He is in utter denial about his sexuality. Jason takes him off to one side to find out what's wrong, and they go up to an empty bedroom to have a heart to heart at which point Jason seduces him, quite roughly. Presents a selection of the author's poems from throughout his life, from playful

early poems to themes of mourning and loss. Matters of Opinion offers an interesting insight into 'public opinion' as reported in the media, asking where these opinions actually come from, and how they have their effects. Drawing on the analysis of conversations from focus groups, phone-ins and broadcast interviews with members of the public, Greg Myers argues that we must go back to these encounters, asking questions such as what members of the public thought they were being asked, who they were talking as, and whom they were talking to. He reveals that people don't carry a store of opinions, ready to tell strangers; they use opinions in order to get along with other people, and how they say things is as important as what they say. Engaging and informative, this book illuminates debates on research methods, the public sphere and deliberative democracy, on broadcast talk, and on what it means to participate in public life. Recognizing that the US is an immigrant country and Germany is not, historians and demographers from each describe how the two countries have come to have the largest number of immigrants among advanced industrial countries; how their conception of citizenship and nationality differ; and how their ethnic compositions are likely to change in the next century as a consequence of migration, fertility trends, citizenship and naturalization laws, and public attitudes. The entire series focuses on Germany and the US. The second edition retains the format that made the first edition so popular and adds new information mainly based on selected published papers in the open literature. See What's New in the Second Edition: State-of-the-art cooling technologies such as advanced turbine blade film cooling and internal cooling Modern experimental methods for gas turbine heat transfer and cooling research Advanced computational models for gas turbine heat transfer and cooling performance predictions Suggestions for future research in this critical technology The book discusses the need for turbine cooling, gas turbine heat-transfer problems, and cooling methodology and covers turbine rotor and stator heat-transfer issues, including endwall and blade tip regions under engine conditions, as well as under simulated engine conditions. It then examines turbine rotor and stator blade film cooling and discusses the unsteady high free-stream turbulence effect on simulated cascade airfoils. From here, the book explores impingement cooling, rib-turbulent cooling, pin-fin cooling, and compound and new cooling techniques. It also highlights the effect of rotation on rotor coolant passage heat transfer. Coverage of experimental methods includes heat-transfer and mass-transfer techniques, liquid crystal thermography, optical techniques, as well as flow and thermal measurement techniques. The book concludes with discussions of governing equations and turbulence models and their applications for predicting turbine blade heat transfer and film cooling, and turbine blade internal cooling. I had been careful, on my arrival in Bologna, to take up my quarters at a small inn, so as not to attract any notice, and as soon as I had dispatched my letters to Therese and the French officer, I thought of purchasing some linen, as it was at least doubtful whether I should ever get my trunk. I deemed it expedient to order some clothes likewise. I was thus ruminating, when it suddenly struck me that I was not likely now to succeed in the Church, but feeling great uncertainty as to the profession I ought to adopt, I took a fancy to transform myself into an officer, as it was evident that I had not to account to anyone for my actions. In today's increasingly competitive financial world, successful risk management, portfolio management, and financial structuring demand more than up-to-date financial know-how. They also call for quantitative expertise, including the ability to effectively apply mathematical modeling tools and techniques, in this case credit. Credit Risk Modeling using Excel and VBA with DVD provides practitioners with a hands on introduction to credit risk modeling. Instead of just presenting analytical methods it shows how to implement them using Excel and VBA, in addition to a detailed description in the text a DVD guides readers step by step through the implementation. The authors begin by showing how to use option theoretic and statistical models to estimate a borrowers default risk. The second half of the book is devoted to credit portfolio risk. The authors guide readers through the implementation of a credit risk model, show how portfolio models can be validated or used to access structured credit products like CDO's. The final chapters address modeling issues associated with the new Basel Accord.
