Ethical and Social Issues in the Information Age Dec 03 2020 An introduction to the social and policy issues which have arisen as a result of IT. Whilst it assumes a modest familiarity with computers, the book provides a guide to the issues suitable for undergraduates. In doing so, the author prompts students to consider questions such as: * How do morality and the law relate to each other? * What should be covered in a professional code of conduct for information technology professionals? * What are the ethical issues relating to copying software? * Is electronic monitoring of employees wrong? * What are the moral codes of cyberspace? Throughout, the book shows how in many ways the technological development is outpacing the ability of our legal systems, and how different paradigms applied to ethical questions often proffer conflicting conclusions. As a result, students will find this a thought-provoking and valuable survey of the new and difficult ethical questions posed by the Internet, artificial intelligence, and virtual reality.

Feminist Cyberethics in Asia Mar 06 2021 The Asian continent which is composed of tiger and emerging economies, is both a big producer and consumer of computer mediated communication. Research on cyberspace in the Asian context, however, began only after the 1990's when the digital revolution spread outside the West. These initial studies which were largely dependent on Western categories, did not probe into the socio-cultural contexts in which the technologies emerged and have developed. This has changed though in the past years. This anthology hopes to contribute, in particular, to the analysis of the mutually constitutive interaction of the use of cyberspace and Asian cultures, with particular attention to ethical, feminist, and religious perspectives especially within Catholic Christianity. Core themes discussed in the contributors' essays are the democratizing potential of cyberspace, the digital/gender divide, global division of digital/virtual labor, cyber-violence against women, women's resistance as well as collusion with masculinist capitalist interests on the Net, masquerading, just internet relations, how web 2.0 spaces are shaping dynamics of power and authority in the church, cyberspace as sacred time and space, and models of spirituality for the digital era.
