Logo May 20 2022 In *Logo: A Retrospective*, you'll
look back and see why attempts to teach Logo in
American schools failed the first time it was
introduced, and you'll learn what you can do so
educators don't make the same mistake again.
You'll explore how teachers can sidestep the all-
too-familiar cycle of zealous overselling,
eventual disappointment, backlash, and
abandonment that undermined Logo's first
appearance in American school curricula. Of
particular interest to teachers, parents,
computer programmers, and members of the general
public, *Logo: A Retrospective*, thoroughly and
more accurately outlines Logo's philosophical and
theoretical framework and shows you how you can
play a part in the current Logo renaissance
already thriving in Australia, Latin America, and
Europe. Specifically, this book contains: a
decade's worth of scholarly research on Logo
information concerning Logo's future and
evolution strategies for handling student
autonomy and teacher intervention recent software
design data and feedback for learning Logo new

research on computer programming's effects on children's cognitive development Without a doubt, computers and other electronic media will be a vital source of learning in the classrooms of the future. The development of powerful new versions of the Logo language, such as MicroWorlds, is welcome evidence that Logo's popularity is on the rise. So put the past behind you. Read *Logo: A Retrospective*, and see what's presently giving schoolchildren all over the world a fresh headstart at their classroom computer terminals.

Ideography and Chinese Language Theory May 28 2020 This book is a much-needed scholarly intervention and postcolonial corrective that examines why and when and how misunderstandings of Chinese writing came about and showcases the long history of Chinese theories of language. 'Ideography' as such assumes extra-linguistic, trans-historical, universal 'ideas' which are an outgrowth of Platonism and thus unique to European history. Classical Chinese discourse assumes that language (and writing) is an arbitrary artifact invented by sages for specific reasons at specific times in history. Language by this definition is an ever-changing technology amenable to historical manipulation; language is

not the House of Being, but rather a historically embedded social construct that encodes quotidian human intentions and nothing more. These are incommensurate epistemes, each with its own cultural milieu and historical context. By comparing these two traditions, this study historicizes and decolonializes popular notions about Chinese characters, exposing the Eurocentrism inherent in all theories of ideography. Ideography and Chinese Language Theory will be of significant interest to historians, sinologists, theorists, and scholars in other branches of the humanities.

Healthy Eating and Active Lifestyles Best Practices in Public Health Jan 04 2021 Overweight and obesity affects over half of all men and women in OECD countries. This has significant health and economic consequences. As part of OECD's work on promoting best practices in public health, this report outlines policy recommendations on how to address two leading overweight risk factors: poor diet and lack of physical activity.

NASA Graphics Standards Manual Dec 15 2021 The NASA Graphics Standards Manual, by Richard Danne and Bruce Blackburn, is a futuristic vision for an agency at the cutting edge of science and exploration. Housed in a special anti-static package, the book features a foreword by Richard Danne, an essay by Christopher Bonanos, scans of the original manual (from Danne's personal copy), reproductions of the original NASA 35mm slide

presentation, and scans of the Managers Guide, a follow-up booklet distributed by NASA.

Logo! Oct 25 2022 With LOGO! a wide range of control tasks can be implemented easily and flexibly - from applications in building and installation technology to tasks in control cabinet construction and in mechanical and instrument engineering. Distributed local control of machines and processes is possible by connecting up a communication module such as AS-Interface. Many switching devices can be replaced with the eight basic and 28 special functions in the logic module for Micro Automation. This practical book describes in a lively manner how programs are developed and hardware is chosen. It explains the standard situations of control technology on the basis of a guide, but also with many practical project tasks. From the quick start to program simulations, the reader is given comprehensive training on the different basic variants and expansion modules, allowing very flexible and precise adjustment to special tasks. The book includes a CD containing a demo version of LOGO!Soft Comfort, the examples described in the book, and the LOGO! manual in different languages.

The End of the World in Medieval Thought and Spirituality Apr 26 2020 This essay collection studies the Apocalypse and the end of the world, as these themes occupied the minds of biblical scholars, theologians, and ordinary people in Antiquity, the Middle Ages, and Early Modernity. It opens with an innovative series of studies on "Gendering the Apocalypse," devoted to the texts and contexts of the apocalyptic through the lens of gender. A second section of essays studies the more traditional problem of "Apocalyptic Theory and Exegesis," with a focus on authors such as Augustine of Hippo and Joachim of Fiore. A final series of essays extends the thematic scope to "The Eschaton in Political, Liturgical, and Literary Contexts." In these essays, scholars of history, theology, and literature create a dialogue that considers how fear of the end of the world, among the most pervasive emotions in human experience, underlies a great part of Western cultural production.

Logo Design Workbook Nov 26 2022 Logo Design Workbook focuses on creating powerful logo designs and answers the question, "What makes a logo work?" In the first half of this book, authors Sean Adams and Noreen Morioka walk readers step-by-step through the entire logo-development process. Topics include developing a

concept that communicates the right message and is appropriate for both the client and the market; defining how the client's long-term goals might affect the look and needs of the mark; choosing colors and typefaces; avoiding common mistakes; and deciphering why some logos are successful whereas others are not. The second half of the book comprises in-depth case studies on logos designed for various industries. Each case study explores the design brief, the relationship with the client, the time frame, and the results.

The Invention of the Emblem Book and the Transmission of Knowledge, ca. 1510–1610 May 08 2021 This study draws a new picture of the invention of the emblem book, and discusses the textual and pictorial means that were developed in order to transmit knowledge, from Alciato to Vaenius, with special emphasis on the emblem commentary and natural history.

Designing Constructionist Futures Jul 10 2021 A diverse group of scholars redefine constructionism--introduced by Seymour Papert in 1980--in light of new technologies and theories. Constructionism, first introduced by Seymour Papert in 1980, is a framework for learning to understand something by making an artifact for and with other people. A core goal of constructionists is to respect learners as creators, to enable them to engage in making meaning for themselves through construction, and to do this by democratizing access to the world's

most creative and powerful tools. In this volume, an international and diverse group of scholars examine, reconstruct, and evolve the constructionist paradigm in light of new technologies and theories.

Organizations in the Face of Growing Competition in the Market Mar 06 2021 The essence of the functioning of any organization, whether commercial or non-profit, is to provide value to groups of recipients whose expectations undoubtedly change over time. Various competition mechanisms in the market apply to both business-oriented organizations and organizations operating in the sphere of public utilities. This monograph includes examples of the problems facing contemporary organizations, and at the same time provides evidence, confirmed by research results, that indicates the direction of current changes. The analysis of changes taking place in organizations was carried out in many dimensions. The content layout adopted in the monograph presents four research perspectives, where the subject of the research is the organization; the modern tools used in organization management, the impact of the market economy on organizations, and sectoral or industry aspects of the organization's functioning. In the first chapter, four studies related to commercial and non-commercial organizations have been collated. Researchers of academic organizations who in order to meet the expectations of students increase their activity

in the field of entrepreneurship and their support for the most talented students. Both examples show the need to conduct research, develop knowledge about own activities, and focus on the needs of the environment. Entrepreneurial universities are open to the implementation of joint ventures with entities in their environment, which affect the development of the university, its students, as well as the entities. Entrepreneurship, which is based on the ability to take advantage of market opportunities, also creates opportunities for developing the ability to flexibly shape and adapt programs, methods and operating principles to the growing expectations of their environment. The ability to develop your potential as well as the potential of your students plays a crucial role. In the pursuit of excellence, a strong focus should be placed on talented students and the development of all possible forms of support that could determine an output of graduates with particularly high development potential. In the research presented in this monograph, the authors compare the activity of universities in the USA, the Netherlands, and Poland in the area of talent development. The comparative analysis becomes a valuable source of indicating imperfections, but also examples of potential forms of positive activity in this area. Equally important in this part of the monograph is the research on the learning organization. Through a bibliometric analysis, the author identified the fields of

research on the learning organization. In addition to research areas related to various dimensions, primarily human, cultural and managerial, the types of organizations in which such research is most often conducted have been indicated. They also include the organizations of the two sectors presented: education and healthcare. The same part of the monograph also presents the results of research in the hotel sector, where the main research problem was the creation of customer value, taking into account the conditions stimulating the dynamics of the business models of hotel enterprises. Referring to business models was considered important because of the significance of decision-making patterns that help to build a competitive advantage and achieve market success by creating value for customers. The concept of creating value for customers is currently treated in cross-sectoral or industry categories and is a universal approach to managing organizations. The second chapter of the monograph presents research on the modern tools used in organization management. Concepts such as work–life balance, shaping the innovation process within the framework of decisions taken in the process, marketing communication, or the use of gamification in research and development, are examples of a wide range of relationships between today's organization and its surroundings. Finding employees, and retaining them, is also a growing challenge in developing countries, where

labor supply is steadily decreasing. The expectations of employees are increasing, especially in relation to respecting the personal, non-professional side of life. Thus, it should be recognized that research on work–life balance is a developing space for organization and management researchers. Modeling the innovation process in an organization is another research trend that is important today, especially in terms of developing competitiveness. Decision-making is one of the key components of the innovation process. This aspect, in qualitative terms, was presented in the next study in the second part of the monograph. Similarly, marketing communication is invariably an important area of research in organizations, which has evolved due to rapidly developing information technologies and, at the same time, the changing preferences of users of these technologies. The last study in this second part of the monograph relates to innovation and the use of computer games. The tools of gamification are used to shape the attitudes of individual energy consumers. The observations presented show that it is worth making attempts to use unconventional methods and tools, in this case, to develop customer knowledge and strengthen the behaviors desired in the energy market. The third chapter of the monograph is devoted to the financial aspects of the functioning of commercial and non-profit organizations in a market economy. Increasing the

efficiency of public entities, specifically conditioned in economic policies and dependent on political decisions, has been the subject of numerous studies. The research study presented in the monograph refers to the relationship between financial strategies and profit management in public industrial companies listed on the Warsaw Stock Exchange. It is worth noting that no research in this field has been conducted to date in the context of the Polish capital market. The next study refers to the French market. Its purpose was to evaluate and test long-term memory in the French stock exchanges. Research results contribute significantly to explaining the lack of consensus regarding long memory in stock returns. The research covers a significant, 25-year period of operation of the Euronext platform during which 6634 observations were provided. The conclusions of the study may be particularly important for regulators and risk managers. Another study presents the results of bankruptcy risk tests for Polish and Czech logistics companies using a comprehensive classification approach. As a result of the research, a tool for risk assessment and forecasting was developed, enabling the early prediction of bankruptcy of enterprises. At the end of the third chapter of the monograph, the results of health expenditure analysis based on information provided by the Health Account System are presented. Particular attention has been focused on the programming sources of financing

healthcare in new European Union countries. Socio-technical and environmental aspects of the organization are the subject of interest of researchers presenting the results of their research in the fourth chapter of the monograph. The problems of economic migration and working conditions have been the subject of interest for many years in the strongly developing trend of labor market research. The research results contained in the study relate primarily to the issues of occupational safety of Ukrainians employed in Poland. These issues are gaining importance, especially when the number of people migrating from Ukraine to Poland in search of work has been growing for several years. In the face of such a large scale of Ukrainian immigrants employed in Polish enterprises, there is still a lack of regulations protecting or securing the interests of employees and employers. The next research presentation highlights the problems of the "circular economy," which, according to the author, is developing too slowly in Poland. The research is valuable for systematizing the idea of a circular economy based on the theoretical and practical aspects of this phenomenon. The results of the analysis are also of practical importance for the process of modeling and implementing this idea in Poland. Further, the innovation paradigm of economic health and the prosperity of society is the subject of the research carried out, based on a review of the health economy considering

innovation and its impact on population growth and prosperity in the world. The research particularly highlights the consequences of socio-demographic, environmental and business changes in the field of consumer goods. The socio-technical, as well as the environmental, aspects of the organization are also included in the last study presented. The purpose of this study was to identify the attitudes of IT employees in the Polish ITC sector towards remote work. Since the effective and efficient collaboration of distributed employees performing remote work has become even more necessary for the success of projects, numerous research works are being conducted focusing on the consequences of remote work. The presented research results are an important contribution to the discussion of researchers and management practitioners. By publishing this monograph, which covers a wide spectrum of research problems in contemporary commercial and non-profit organizations, the editors and authors presenting the results of their research express a hope that they are contributing to the widespread dissemination and enrichment of knowledge and, consequently, socio-economic development.

Beyond Technology's Promise Sep 19 2019 This book, first published in 1994, examines how children use home computers, and proposes steps to facilitate a better educational use of available technology.

Merck Veterinary Manual Feb 23 2020 For more than forty years, animal health professionals have turned to the Merck Veterinary Manual for integrated, concise and reliable veterinary information. Now this manual covering the diagnosis, treatment, and prevention of diseases of companion, food and zoo animals is available on an easy-to-use, fully searchable CD-ROM. The CD includes the full text of The Merck Veterinary Manual 8/e and has been enhanced with picture links featuring original anatomical artwork and numerous clinical and diagnostic illustrations, table links and quick search links that provide quick access to cross referenced text.

The European Emblem Jan 24 2020 Emblems—pictorial designs with accompanying mottoes and epigrams—helped to shape virtually every form of verbal and visual communication in the West during the sixteenth and seventeenth centuries. A recent re-awakening of scholarly interest in the emblem has brought to light the difficulty of locating and consulting the unorganized mass of available material. Recognizing the need for a large-scale systematic index to the emblem, the editor organized a symposium at McGill University to discuss the possibilities of preparing such an index. The resulting papers by six symposium participants—Barbara Becker-Cantarino, Peter M. Daly, Peter

Erb, G. Richard Dimler, Lorelei Robins, and Alan Young—contribute to our knowledge of the emblems of Peacham and Corrozet, the Dutch love emblems, the Jesuit emblem, and emblems used in books of mediation. The essays also discuss the problems and procedures involved in preparing an Index Emblematicus, a work which would serve scholars working in the fields of literature, art, culture, religion, history, and the languages. The volume is richly illustrated with over forty emblem reproductions.

The Age of Minerva, Volume 1 Dec 03 2020 This book is a volume in the Penn Press Anniversary Collection. To mark its 125th anniversary in 2015, the University of Pennsylvania Press rereleased more than 1,100 titles from Penn Press's distinguished backlist from 1899-1999 that had fallen out of print. Spanning an entire century, the Anniversary Collection offers peer-reviewed scholarship in a wide range of subject areas.

The PC Companion Jul 30 2020

Museum Management Oct 21 2019 This book centers on museum management with particular focus on risk management. It sees the museum as a modern institution that, in addition to its classical

heritage function (collections management), also provides an educational function and implements this education through experience (the experiential function of the museum). It represents a combination of academic excellence and experience from real managers from museums and other public institutions. Additional topics such as strategic and operational museum management and museum research management are discussed and case studies from daily management practice are included.

Encyclopedia of the Sciences of Learning Nov 21 2019 Over the past century, educational psychologists and researchers have posited many theories to explain how individuals learn, i.e. how they acquire, organize and deploy knowledge and skills. The 20th century can be considered the century of psychology on learning and related fields of interest (such as motivation, cognition, metacognition etc.) and it is fascinating to see the various mainstreams of learning, remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology. Beyond folk psychology and its naïve theories of learning, psychological learning theories can be grouped into some basic categories, such as behaviorist learning theories, connectionist learning theories, cognitive learning theories, constructivist learning theories, and social learning theories. Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines, such as philosophy and epistemology, education, information science, biology, and – as a result of the emergence of computer technologies – especially also in the field of computer sciences and artificial intelligence. As a consequence, machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences

became more specialized and complex, the various fields of interest were widely spread and separated from each other; as a consequence, even presently, there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The Encyclopedia of the Sciences of Learning provides an up-to-date, broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields, including relevant areas of instruction, pedagogy, cognitive sciences, and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists, educators, engineers, and technical staff active in all fields of learning. More specifically, the Encyclopedia provides fast access to the most relevant theoretical terms provides up-to-date, broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies; supplies clear and precise explanations of the theoretical terms, cross-references to related entries and up-to-date references to important research and publications. The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning; the entries are written by a distinguished panel of researchers in the various fields of the learning sciences.

Computer-Based Learning Environments and Problem Solving Oct 01 2020 Most would agree that the acquisition of problem-solving ability is a primary goal of education. The emergence of the new information technologies in the last ten years has raised high expectations with respect to the possibilities of the computer as an instructional tool for enhancing students' problem-solving skills. This volume is the first to assemble, review, and discuss the theoretical, methodological, and developmental knowledge relating to this topical issue in a multidisciplinary confrontation of highly recommended experts in cognitive science, computer science, educational technology, and instructional psychology. Contributors describe the most recent results and the most advanced methodological approaches relating to the application of the computer for encouraging knowledge construction, stimulating higher-order thinking and problem solving, and creating powerful learning environments for pursuing those objectives. The computer applications relate to a variety of content domains and age levels.

Investigations in Algebra Aug 31 2020
Investigations in Algebra departs from a preoccupation with calculus as the ultimate goal of and the universal introduction to advanced mathematics by using Logo to

explore combinatorics, number theory, the study of discrete functions, and other topics that are not on the traditional path to calculus. This approach encourages students to participate actively in exciting mathematics, developing in them a facility for abstraction and an appreciation for the power of mathematical methods. Most of the projects in the first two parts of the book have been worked through by students at Woburn High School, often without assistance from a teacher. In three parts, *Investigations in Algebra* emphasizes the treatment of functions as concrete objects modeled as Logo procedures, applies the techniques of induction and recursion to combinatorial problems, and takes up topics in number theory (including unique factorization congruence, and multiplicative functions). Integral to the presentation are numerous carefully constructed problems routine exercises, long term projects, and open ended experiments - developed in twenty years of classroom use. Albert Cuoco teaches mathematics at Woburn High School, in Woburn, Massachusetts. *Investigations in Algebra* is included in the series *Exploring with Logo*, edited by E. Paul Goldenberg.
