Kitty City Apr 06 2021 You may think you know Judy Chicago -- but it's time to take another look. Kitty City is a celebration of Chicago's life with these delightfully independent creatures. With a lavish design that evokes a contemporary version of illuminated manuscripts, Chicago tells this charming real-life story by adapting the concept of the Book of Hours, which first gained popularity in the early 1400's as intricately illustrated private devotional books, containing texts and prayers for each hour of the day -- meant to inspire and provide points of reflection for their owners. Cat lovers will recognize the familiar routine. The day begins with "6 A.M: Cat Alerts Clocks" and quickly moves to "7 A.M: Chowtime" and "8 A.M: Kitty Clean Up." The cycle continues through snacks and grooming, naps and play before ending with "10 AM: Home is Where the Cat Is." Interspersed among these hourly activities are thought-provoking "Feline Fact" pages as well as vignettes that highlight a number of the kitty companions that Chicago has lived with since the early 60's when she found her first stray kitten. With exquisite full-color illustrations throughout -- including new Judy Chicago watercolors created for this project -- Kitty City is breathtaking in an exquisite package, a companion to be treasured by cat lovers and art aficionados everywhere.

Cat Sense Dec 22 2019 Cats have been popular household pets for thousands of years, and their numbers only continue to rise. Today there are three cats for every dog on the planet, and yet cats remain more mysterious, even to their most adoring owners. Like dogs, cats evolved as solitary hunters, and, while many have learned to live along with humans and even feel affection for us, they still don't quite "get us" the way dogs do, and perhaps they never will. But cats have rich emotional lives that we need to understand and understand if they are to thrive in our company. In *Cat Sense*, renowned anthrozoologist John Bradshaw takes us further into the mind of the domestic cat than ever before, using cutting-edge scientific research to dispel the myths and explain the true nature of our feline friends. Tracing the cat's evolution from lone predator to domesticated companion, Bradshaw shows that although cats and humans have been living together for at least eight thousand years, cats remain independent, predatory and wary of contact with their own kind, qualities that often clash with our modern lifestyles. Cats still have three out of four paws firmly planted in the wild, and within only a few generations can easily revert back to the independent way of life that was the exclusive preserve of their predecessors some 10,000 years ago. Cats are astonishingly flexible, and given the right environment they can adapt to a life of domesticity with their owners-but to continue to do so, they will increasingly need our help. If we're to live in harmony with our cats, Bradshaw explains, we first need to understand their inherited quirks: understanding their body language, keeping their environments-however small-sufficiently interesting, and becoming more proactive in managing both their natural hunting instincts and their relationships with other cats. A must-read for any cat lover, *Cat Sense* offers humane, penetrating insights about the domestic cat that challenge our most basic assumptions and promise to dramatically improve our pets' lives-and ours.

Feline Nutrition Oct 24 2022 Cats, through desert adaptation, require water as a component of their food. They also lack the metabolic pathways to efficiently process plant material, thus defining them as obligate carnivores; their food should consist only of meat, fat, bones, and organs. These are two very simple yet fundamental aspects of feline nutrition. A cat is solely designed to hunt, kill, eat, and process meat. Through millions of years of evolution, cats have developed unique characteristics of anatomy, physiology, metabolism, and behavior indicative of obligate carnivores. Many feline diseases such as diabetes, obesity, urinary tract disorders, chronic renal disease, and irritable bowel syndrome can be directly attributed to low moisture, low-meat-protein, and high-carbohydrate levels that plague many of today's commercially produced pet foods. Many cats survive on these dry, supplemented, plant-based diets but they do not thrive. This book will discuss basic feline anatomy and physiology (explaining how a cat's body metabolizes nutrients) coupled with interpreting pet food labels which will help you make healthy selections whether choosing to purchase commercial food or making a home-prepared raw diet to feed your cat.
