Accounting Theory and Practice Feb 08 2021 Excerpt from Accounting Theory and Practice: A First Year Text There are many things, in the writing of a book, which can be said only in the foreword. First, the "raison d'etre" of the book may require an explanatory word. Second, it may not be out of place to discuss some of the many points of academic controversy; such as the difference between bookkeeping and accounting; as to whether accounting is an art or a science; the various theories of debit and credit, etc. Finally, consideration may be given to the need of a knowledge of accounting on the part not only of those preparing for business but also of those expecting to enter any of the professions. With regard to the first point, it may be said that although there are available excellent treatises on accounting; the author feels that the field is rather barren of textbooks for the use of college students. This book is an effort to supply this need for students of first-year accounting. As to the second point, suffice it to say that the author does not know the difference between bookkeeping and accounting and doubts whether there is any except in popular parlance. As to whether accounting is an art or a science, he believes that there is an art and also a science of accounting, the former resting upon the principles established by the latter. The necessary brevity of this introduction does not permit an adequate discussion of all the theories of debit and credit. *Accounting Theory and Practice, Vol. 3* Nov 24 2019 Excerpt from Accounting Theory and Practice, Vol. 3: A Comprehensive Statement of Accounting, Principles and Methods, Illustrated, by Modern Forms and Problems Although history is silent regarding the origin of accountancy, we are, nevertheless, safe in assuming that, at least in its rudest form, it must have come into existence at a very early period. In all probability, the human instinct to exchange something in one's possession for something belonging to another, is responsible for the invention of some system of account-keeping. Wherever such exchange or barter required more than the mere handing over of one article in exchange for another, e.g., when it required an adjustment of valuations, a calculation was necessary to enable the carrying out of the exchange to the satisfaction of both parties. That the accountancy profession can claim antiquity is made evident in the relics of the earliest civilizations. Research among the ruins of ancient Babylon has brought to light a large number of tablets, many of which are as old as 2500 B. C., containing complete records of commercial transactions. It is even suggested that the Phœnicians evolved the alphabet for the purpose of bookkeeping, in order that they might be able to express the debits and credits and so avoid being cheated.
