Available here for the first time in English, this volume showcases pensiero come principio d'economia pubblica, Cattaneo's pioneering vision of economic growth that emphasized the central role of intelligence and will in economic processes, the value of knowledge and innovation, and the importance of liberty. This classic of Italian thought is framed by a long biographical sketch of Cattaneo's life before, during, and after the Italian Risorgimento and an afterword that demonstrates the continuing relevance of Cattaneo's social, political, and economic ideas to today's ongoing debate about the importance of a free society. Miguel-Ángel Galindo Martín, Joaquín Guzman Cuevas and Domingo Ribeiro Soriano University of Castilla-La Mancha, Albacete, Spain University of Sevilla, Sevilla, Spain University of Valencia, Valencia, Spain The economic growth and the progress of the nations have been two issues that have worried to the economists during centuries. The classical eco- mics books have developed different theories and considered several f- tors that could explain those processes. Unfortunately, a single answer has not been obtained and nowadays economists try also to achieve a response to the mechanism of economic growth. Economic growth has been considered as one of the most relevant e- nomic policy. As it is well known, the validity of an economic policy is measured in terms of economic growth rate. It is supposed that those countries that obtain a higher economic growth rate are designing more efficient economic policies than those that show lower rates. The main corollary to this hypothesis is that the developing countries must follow and copy the economic policies designed by the developed countries. Nelson Fausto The Greek myth of Prometheus with its picture of a vulture feasting on its chained victimhas traditionallyprovided a visualimageoffliverregeneration. Itis apowerful and frightening representationbut ifone were to substitute the vulture by a surgeon and Prometheus by a patient laying on a properly prepared operating table, the outcomeoftheprocedurewould not differ significantlyfrom that describedbyGreek poets. Yet few of us who work in the field have stopped long enough to ask where this myth originated. Did the poet observe a case of liver regeneration in a human being? Was it brilliant intuition or perhaps, literally, just a 'gut feeling' of a poet looking for good rhymes that led to the prediction that livers grow when part of the tissueisremoved? Thisbookdoesnotattemptto solve these historical issues. Itdoes, instead, cover in detail some of the major modem themes of research on liver regen eration, injury and repair. As indicated in Dr. N. Bucher's chapter, the modem phase ofexperimental studies on liver regeneration started in 1931 with the publication by Higgins and Anderson of a method to perform a two-thirds resection of the liver of a rat. The technique described has 3 remarkable features: 1) it is highly reproducible, resulting in the removal of 68% of the liver, 2) it has minimal if any mortality, and 3) it consists only of blood vessel ligation and does not involve cutting through or wounding hepatic tissue. This book represents a first attempt to investigate the relations between Law and Agroecology. There is a need to adopt a transdisciplinary approach to multifunctional agriculture in order to integrate the agroecological paradigm in legal regulation. This does not require a super-law that hierarchically purports to incorporate and supplant the existing legal fields; rather, it calls for the creation of a trans-law that progressively works to coordinate interlegalities between different legal fields, respecting their autonomy but emphasizing their common historical roots in rus in the process. Rus, the rural phenomenon as a whole, reflects the plurality and interdependence of different complex systems based jointly on the land as a central point of reference. "Rural" is more than "agricultural": if agriculture is understood traditionally as an activity aimed at exploiting the land for the production of material goods for use, consumption and private exchange, rurality marks the reintegration of agriculture into a broader sphere, one that is not only economic, but also social and cultural; not only material, but also ideal, relational, historical, and symbolic; and not only private, but also public. In approaching rus, the natural and social sciences first became specialized, multiplied, and compartmentalized in a plurality of first-order disciplines; later, they began a process of integration into Agroecology as a second-order, multi-perspective and shared research platform. Today, Agroecology is a transdiscipline that integrates other fields of knowledge into the concept of agroecosystems viewed as socio-ecological systems. However, the law seems to still be stuck in the first stage. Following a reductionist approach, law has deconstructed and shattered the universe of rus into countless, disjointed legal elementary particles, multiplying the planes of analysis and, in particular, keeping Agricultural Law and Environmental Law two separate fields. Inhaltsangabe:Definition of problem This paper deals with the future strategic orientation of manufacturers of luxury cars. The sociological, political, ecological, technological and economic environmental factors and their influence on corporate orientation will be highlighted and analysed. This fundamental problem for car niche brands is investigated through the example of Maserati, an upmarket brand which has become, like no other, both a trendsetter and a victim of the expectations of its patrons and customers and is now struggling for market shares together with its parent company. This paper will initially highlight influencing factors and also the need for efficiency in manufacture and production, as well as the new tasks and challenges arising from

legislation. Macroeconomic factors, such as the shrinking purchasing power in developed countries like the U.S. due to inflation (and stagflation) worries (which result from the daily rise in raw material prices), exert just as great an influence on car sales figures as the growing number of super-rich in Third World countries. The question concerning the shift of target markets arises. Do the raw materials inhibit sales for these products? Or is the clientele immune? What innovations are demanded, and are they compatible with the attributes associated with super sports cars and luxury cars? Ferrari, Maserati, Lamborghini, and even Aston Martin are manufacturers who boast that they make cars with horrendous power ratings, fuel consumption, and emission levels. Their customers love the sound of the engines, comparable as they are with aircraft engines. They produce engines with eight, ten or even twelve cylinders, epitomising power, but at the same time are more suitable for the race track than for the road if one compares their figures with those of classic mass-market cars. The customers rate performance and sound higher than fuel consumption per litre and environmental awareness. These are geared to basic male instincts. Beauty of form, brute force and eroticism are mostly described in terms of beautiful women or sins or mythological mental attributes. The marketing is concerned with lifestyle, passion, and the child in people, the Freudian id. A man simply wants to own these mighty projectiles; forget common sense. The owner of such a car is, according to this car's marketing image, the one who has created it. He is successful, healthy, rich and good-looking. A majority of the world's male [...]

Lo scopo della psicologia dello sviluppo è descrivere e spiegare i cambiamenti nel comportamento e nelle attività psicologiche dal periodo prenatale fino alla vecchiaia. Il volume affronta in modo approfondito i principali temi della psicologia dello sviluppo dal periodo prenatale fino alla vecchiaia, esaminandone sia gli aspetti biologici che quelli culturali. Nel testo sono presentate le più importanti teorie dello sviluppo in una prospettiva storica e, in particolare, quelle di Piaget, Vygotskij e Bowlby, che permettono di comprendere gli orientamenti della ricerca contemporanea e forniscono una sintesi moderna rispetto alle radicali posizioni innatiste e ambientaliste. Il testo presenta inoltre recenti ipotesi, sostenute da evidenze sperimentali, che hanno portato a parziali revisioni di queste teorie. Il volume fornisce in tal modo una visione complessiva e aggiornata delle questioni teoriche e metodologiche più rilevanti della psicologia dello sviluppo ed è consigliato per studenti universitari, insegnanti, operatori del settore, genitori e per tutti coloro che sono interessati a questa disciplina. Il curatore di questa edizione ha inoltre apportato integrazioni e adattamenti specifici per il pubblico italiano. A tal fine, sono state anche illustrate recenti ricerche italiane rilevanti per i temi trattati nel testo.

378.1 Fiorenza Belussi, Giorgio Gottardi, and Enzo Rullani This volume collects some papers presented at the Vicenza conference "The Future of Districts", held in June 1999, organised by the Department of Technology and Management of Industrial Systems of the Faculty of Engineering of Padua University, with the collaboration of several engineers, industrial economists, and experts in the issue of technology management. This was the starting point of a long-lasting and painful collective discussion, the results of which are documented here, during many meetings of this "itinerant" group, including the workshop in Padua, organised by Professor Luciano Pilotti and held in May 2001, "Systems, governance & knowledge within firm networks" at the Department of Economics of the University of Padua, and the recent international research seminar, held in May 2002, in Rome at the Tagliacarne Institute, within the EU sponsored project "Industrial districts' re location processes: identifying policies of EU enlargement West-East ID". The reason we decided to organise this book was not only to underline the importance of the industrial district (ID) model as a tool of propulsive local growth in a country like Italy. On the contrary, the idea that moved us was the theoretical dissatisfaction with the way in which the phenomenon of local development and industrial clustering of specific industries was treated in the international approach of the various disciplines. If, as we believe, the history of languages is the history of the construction of an ideal artefact that permits a specific interpretation of the linguistic reality and helps to approve and assimilate a certain zone of diversity, enabling the accumulation of collective historical knowledge and making us identify it with a social community and a territory, then it must be agreed that languages are extremely complex entities. The new linguistic diversity that cultural globalisation and recent population movements have installed in most traditional linguistic territories has probably put the ideology of the national language into a state of crisis and, as a consequence, has made the ancient, intrinsic diversity of all languages visible, at least to the extent that this is still possible. Nowadays, then, the old linguistic diversity of dialects, of parlangues, of local lexicons and the cultural forms that are reflected in these, of varieties and previously unsuccessful linguistic entities has been given a new opportunity in a world where the cohesion of societies and the welfare of citizens must be guaranteed using all available means. Looked at this way, the intricacy of languages may even open up an opportunity for local economic and social development.

Tourism in the Mediterranean Sea: An Italian Perspective is the product of a collaborative group of experts in the field of tourism. Academics, whose research focuses on regional tourism system governance, alongside several experts from the tourism sector, contributed to the volume with distinct issues related to the tourism industry.

Autism is a complex disorder of neurodevelopment resulting in pervasive abnormalities in social interaction and communication, repetitive behaviours and restricted interests. It presents difficult challenges to physicians and other professionals and especially to the parents and families of affected individuals. The aim of this volume is to provide an update on this multi-faceted condition, and to review most of its major features, in particular its biology, genetics and current understanding of its brain basis. The book emphasises the importance of early detection, and spells out appropriate steps for clinical diagnosis and investigations such as neuropsychology, electrophysiology and imaging. Of particular interest are chapters that focus on differential diagnosis, advances in neurogenetics and molecular biology, possible consequences of immunisations and the relation between autism and epilepsy.

La difesa delle (tue) idee è un agile libro di facile lettura e comprensione destinato a tutti quelli che pensano di avere buone idee ma non sanno come difenderle ed a tutti quelli che prima di leggere questo libro non pensavano di avere buone idee da dover difendere.

Throughout history, the city has always had to deal with social 'otherness', i.e. with class privileges and, consequently, with discrimination and marginalization of minorities, of the less well-off, of foreigners, in short, with the differences in status, culture, religion. So that the urban fabric has ended up structuring itself also in function of those inequalities, as well as of the strategic places for the exercise of power, of the political, military or social control, of the spaces for imprisonment, for the sanitary isolation or for the 'temporary' remedy to the catastrophes. From the first portraits of cities, made and diffused at the beginning of the fifteenth century for political exaltation purposes or for religious propaganda and for devotional purposes, which often, through increasingly refined graphic techniques, distort or even deny the true urban image, we reach, at the dawn of contemporary history, the new meaning given by scientific topography and new methods of representation; these latter aimed at revealing the structure and the urban landscape in their objectivity, often unexpected for who had known the city through the filter of 'regime' iconography. The representation of the urban image

still shows the contradictions of a community that sometimes includes and even exalts the diversities, other times rejects them, showing the unease of a difficult integration. Škocjanske jame imajo bogato zgodovino. V tej knjigi je obravnavan le sorazmerno kratek čas med obema svetovnjima vojnama, ko je Avstrija območje predala Italiji. Večji del Škocjanskih jam je bil raziskan pred letom 1914, zato je bil glavni cilj jamo razviti v turistično znamenitost. Jame so obiskovali že prej, a v 20. in 30. letih so si prizadevali urediti turistične poti skozi jame, z novimi mostovi in stezami, a tudi novim predorom do površja. Da bi vse to uskladili z italijanskimi zakoni, je povzročalo težave, zato so z odprtjem odlašali do leta 1923. Ob tem so jame še dodatno raziskali, premerili in o njih objavili sveže znanstvene razprave. Poročali so tudi o malo poznani usodni nesreči. Skozi celotno obdobje so posamezni vodniki, raziskovalci in upravniki napisali zelo človeško in razburljivo zgodbo. Kar knjigo dela še posebej pomembno, je izjemen prispevek italijanskih arhivov in zgodovinarjev. Il volume affronta con taglio operativo la disciplina fiscale, contabile e civilistica delle cooperative edilizie, e costituisce un valido supporto per i professionisti e per coloro che operano nel settore. La struttura dell'opera segue l'ordine consequenziale della vita di una cooperativa; si parte dall'analisi della sua costituzione, con particolare attenzione: alla scelta della tipologia (a proprietà divisa o indivisa) alla figura del socio che nelle cooperative edilizie assume una posizione specifica ai finanziamenti per poi passare all'esame degli aspetti legati alla sua gestione, soffermandosi su: programma costruttivo libri e registri contabili, fiscali e sociali gestione finanziaria chiusura di un lotto vigilanza fase liquidatoria agevolazioni Tutta la trattazione è supportata da schemi, raffronti tra le diverse tipologie di cooperative e tracce di compilazione di verbali. Completa il volume una ricca Appendice che raccoglie i principali interventi normativi, di prassi e giurisprudenza in materia. Starting in the 1970s, the Italian government has passed a set of legislative provisions known as integrazione scolastica. Separate special education classes were abolished and all students were admitted into mainstream schools, regardless of any disability, impairment, or any other personal characteristic or social circumstance. The Italian model seems to be an ideal context for the development of inclusive education when compared to other realities in Europe and in the world, where, in some cases, special schools and/or classes are still the only available options for students with disabilities or impairments. Does such perception correspond to reality? This book aims to critically analyse and discuss the Italian model of inclusive education from international and intercultural perspectives, as a way to address a crucial theme for educators, school administrators, policymakers, citizens and parents.
