Critical, wide-ranging analyses of Detroit's redevelopment and alternative visions for its future. A guide to the architecture and landmarks of Detroit provides a series of tours through the city's districts and neighborhoods. Since its launch in 1987, the History of Cartography series has garnered critical acclaim and sparked a new generation of interdisciplinary scholarship. Cartography in the European Enlightenment, the highly anticipated fourth volume, offers a comprehensive overview of the cartographic practices of Europeans, Russians, and the Ottomans, both at home and in overseas territories, from 1650 to 1800. The social and intellectual changes that swept Enlightenment Europe also transformed many of its mapmaking practices. A new emphasis on geometric principles gave rise to improved tools for measuring and mapping the world, even as large-scale cartographic projects became possible under the aegis of powerful states. Yet older mapping practices persisted: Enlightenment cartography encompassed a wide variety of processes for making, circulating, and using maps of different types. The volume's more than four hundred encyclopedic articles explore the era's mapping, covering topics both detailed—such as geodetic surveying, thematic mapping, and map collecting—and broad, such as women and cartography, cartography and the economy, and the art and design of maps. Copious

bibliographical references and nearly one thousand full-color illustrations complement the detailed entries. The record of each copyright registration listed in the Catalog includes a description of the work copyrighted and data relating to the copyright claim (the name of the copyright claimant as given in the application for registration, the copyright date, the copyright registration number, etc.). One of Detroit's most defining modern characteristics—and most pressing dilemmas—is its huge amount of neglected and vacant land. In *Mapping Detroit: Land, Community, and Shaping a City*, editors June Manning Thomas and Henco Bekkering use chapters based on a variety of maps to shed light on how Detroit moved from frontier fort to thriving industrial metropolis to today's high-vacancy city. With contributors ranging from a map archivist and a historian to architects, urban designers, and urban planners, *Mapping Detroit* brings a unique perspective to the historical causes, contemporary effects, and potential future of Detroit's transformed landscape. To show how Detroit arrived in its present condition, contributors in part 1, *Evolving Detroit: Past to Present*, trace the city's beginnings as an agricultural, military, and trade outpost and map both its depopulation and attempts at redevelopment. In part 2, *Portions of the City*, contributors delve into particular land-related systems and neighborhood characteristics that encouraged modern social and economic changes. Part 2 continues by offering case studies of two city neighborhoods—the Brightmoor area and Southwest Detroit—that are struggling to adapt to changing landscapes. In part 3, *Understanding Contemporary Space and Potential*, contributors consider both the city's ecological assets and its sociological fragmentation to add dimension to the current understanding of its emptiness. The volume's epilogue offers a synopsis of the major points of the 2012 Detroit Future City report, the city's own strategic blueprint for future land use. *Mapping Detroit* explores not only what happens when a large city loses its main industrial purpose and a major portion of its population but also what future might result from such upheaval. Containing some of the leading voices on Detroit's history and future, *Mapping Detroit* will be informative reading for anyone interested in urban studies, geography, and recent American history.
