The legal status of the institution of diplomatic asylum really presents two separate questions. (1) Is there evidence that states have regarded the practice of granting such asylum to political refugees as sanctioned by a rule of international law? (2) Assuming this to be the case, does the available evidence make it possible to define a "political refugee" and to determine which party to a dispute has the right to decide upon this question? While in many cases the two questions are not dearly separated in the discussions between the parties involved, they will be treated separately in the following pages. Part one will attempt to answer this question: Assuming the political nature of an offence can be established, is there evidence that states have regarded the practice of granting diplomatic asylum as sanctioned by a rule of international law? Obviously, the two questions cannot be separated entirely but it seems advisable to try to isolate them as much as possible. CHAPTER I NATURE AND SCOPE OF THE PROBLEM The term "asylum" is used to identify such a variety of phenomena that the following distinctions must be made before the problem can be properly discussed I. Between diplomatic and territorial asylum. The importance of this distinction was pointed out by the International Court of Justice in the Colombian-Peruvian Asylum Case,¹ often referred to as the Haya de la Torre Case. To develop an improved conceptual approach to managing change in ecosystems crossing natural and political boundaries, the workshop focused on defining terms, uncovering areas of misunderstanding and barriers to cooperation, and developing methods to determine the most important problems and issues. Three needs emerged from the prioritization process: a precise definition of the management objectives for park and wilderness lands and how to integrate them with objectives for surrounding lands, nationally as well as site-specific; more information about physical, biological, and social components of park and wilderness ecosystems from both sides of political boundaries; and key indicators of ecosystem condition as well as methods for evaluating management effectiveness. All of these common themes point to a need for more precise direction in management goal setting and more accurate assessment of progress toward goals. The book includes an introductory chapter by the editors and summary in which they outline a direction for ecosystem management in the next critical decades. The other chapters by individual contributors include studies on laws governing park and wilderness lands, paleoecological records that reveal the historic effects of climatic variations on vegetation change, succession and natural disturbance in relation to the problems of what can and should be preserved, managing ecosystems for large populations of vertebrates, the management of large carnivores, effects of air pollution, lake acidification, human ecology and environmental management, the role of economics, cooperation in ecosystem management, and management challenges in Yellowstone National Park.
