Explains the process by which the US government selects architect-engineering firms to perform design services for it, and guides the prospective contractor through the maze of requirements from finding the announcement of available contracts, almost (but not quite) to the Senate subcommittee hearings on graft. Covers how to go after a job, the proposals and negotiations leading to getting it, the administration and recording requirements after the contract is awarded, and the requirements when the project is completed. Updated to the 1995 versions of the regulations. registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. A User's Guide to Copyright is intended as a guide and a reference work on all aspects of copyright, including ownership, transmission, and licensing. This book also deals with the more straightforward copyright problems that arise and explores copyright law as it applies to certain organizations, businesses, and people for whom copyright plays an important part in their daily life, from publishers and printers to libraries, schools, music industry, film industry, television and radio

stations, computer software and firmware, and character merchandising. This book is comprised of 29 chapters divided into two sections and begins with an overview of copyright law, paying particular attention to the basic rules of copyright, statutes and statutory instruments, and Copyright Act 1956. The reader is then introduced to copyright works encompassing literature, drama, music, and the arts as well as sound recordings, cinematograph films, and television and radio broadcasts. The following chapters discuss the concept of originality, breach of confidence, and publication in relation to copyright. Infringement of copyright is also considered, along with exceptions and defenses to copyright actions; the law on industrial designs; and the uses of copyright in fields such as publishing, music, libraries, performing arts, and architecture. This monograph is designed to assist people whose work involves them in day-to-day dealings with copyright. This User's Guide is a resource for investigators and stakeholders who develop and review observational comparative effectiveness research protocols. It explains how to (1) identify key considerations and best practices for research design; (2) build a protocol based on these standards and best practices; and (3) judge the adequacy and completeness of a protocol. Eleven chapters cover all aspects of research design, including: developing study objectives, defining and refining study

questions, addressing the heterogeneity of treatment effect, characterizing exposure, selecting a comparator, defining and measuring outcomes, and identifying optimal data sources. Checklists of guidance and key considerations for protocols are provided at the end of each chapter. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program.
