Readers will learn the answer to this question and more in this exciting book. Colorful, up-close photographs of these beautiful, tiny frogs in their native habitats give readers a stunning view of these fascinating creatures. A vibrant new series that explores animal life...but not as we know it! Everything You Need to Know About Frogs - and toads, snakes, lizards, salamanders, turtles, newts, tortoises, crocodiles - in fact, a whole host of amphibians and reptiles. Take a look at creatures from all angles, from fascinating information on habitat and breeding habits, as well as oddities, such as how to tell the difference between an alligator and its 300-million-year-old relative. Packed with close-ups, quizzes and games to teach you all about our cold-blooded friends. The quirky illustrations and original design will have anyone transfixed - discover the most amazing animals and untold tales are here! This is the first book to cover all the poison frogs in detail. All 65 species of Dendrobates, Epipedobates, Minyobates, and Phyllobates are discussed, with extensive coverage of the dozen species that are best known to naturalists and hobbyists alike. Discusses natural history, ecology as a field of study, environmental issues that face our society, and human relationships with the natural world Over the last half a billion years, there have been five mass extinctions of life on earth. Scientists around the world are currently monitoring the sixth, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. Elizabeth Kolbert combines brilliant field reporting, the history of ideas and the work of geologists, botanists and marine biologists to tell the gripping stories of a dozen species – including the Panamanian golden frog and the Sumatran rhino – some already gone, others at the point of vanishing. The sixth extinction is likely to be mankind's most lasting legacy and Elizabeth Kolbert's book urgently compels us to rethink the fundamental question of what it means to be human. Describes the life cycle of a frog from tadpole to adult. Looks at poison dart frogs, with information about where they live, how their poison serves to keep predators away, and how they grow from tadpoles to frogs. Where do frogs go in the daytime? Is the Boiling Frog Theory true? How do frogs climb up sheets of glass? In this book Professor Mike Tyler answers all these questions and dozens more. Questions about banana frogs, poison-dart frogs, holy cross toads, fire-bellied toads and their many cousins around the world. Ages 8+. See the colorful, comical, and creepy characters of the reptile and amphibian kingdom as you've never seen them before. The emperor newt, boa constrictor, prairie king snake, panther chameleon, poison dart frog, and many others come to life in eye-popping stereoscopic detail and dazzling color in this foolproof 3-D viewing experience. Complete with lenses conveniently bound into the front cover at precisely the right viewing distance, Amphibians & Reptiles in 3-D lets viewers safely observe these intriguing creatures as they crawl, hop, and slither right off the page. With informative captions and a fun glossary of terms, this collection of extraordinary photographs will amaze and delight nature lovers of all ages. Readers will learn the history, the science, and the care needed for keeping fun and exotic pets, such as a poison dart frog. Authors Alvin and Virginia Silverstein, and Laura Silverstein Nunn explain everything you need to keep your pet safe and happy. Poison dart frogs are beautiful and interesting amphibians, who make fascinating vivarium subjects. Although famous for their toxic skin secretions, these colorful frogs stop producing their protective poisons after a brief time in captivity and become safe to maintain. But while most keepers will find poison dart frogs to be fantastic pets, it is important to learn as much as you can about their biology, way of life and the habitats from which they hail to ensure they thrive in your hands. Inside, you will find all of the information you need to care for poison dart frogs and provide yours with a long and healthy life. By incorporating the lessons presented here and doing your best to remain observant of your new pet, success should be within your reach. The Dart Frog hobby is still fairly new to the world, especially within Canada. In fact some of the species we work with at Jungle Jewel Exotics, such as the *Ranitomeya benedicta* and the *Ranitomeya summersi* were only discovered and documented by science in 2008. They are truly amazing animals, with striking colors ranging from bright orange, yellow, red, blue, green and some that almost look like they glow neon. Each frog has its own personality. Some are shy, and others so bold they will jump onto your hand when you reach into their Vivarium, which is the little rain forest you create for them. This beginners guide provides vital information on the origin, physical attributes, how to buy, temperament, health problems, feeding, and socialization of this wonderful pets Get your copy today by scrolling up and clicking Buy Now to get your copy today This series uses the device of looking at a particular type of animal over the course of a day to discuss different aspects of the animal's anatomy and behaviour. If you're wondering about frogs, you've come to the right place! Here are some interesting facts about these fascinating creatures. Frogs belong to the Anura order of amphibians and are largely carnivorous. Learn more about frogs by watching this informative ! Read on to learn more about the unique features of frogs. And be sure to check back often for more fun facts about frogs! Did you know that frogs can be deadly to people? Some species of frogs have poison on their skins! Although this is not a direct threat to humans, it can kill predators by inflicting massive damage. Poison dart frogs are a particular concern, as their toxins can cause heart failure and fibrillation. The bright colors of frogs serve as warnings to predators. Many frogs use camouflage as a way to avoid predators. However, some species have evolved special abilities for hiding and camouflage. One species, the White's tree frog, can change its color to match the surrounding temperature. To adapt to a change in temperature, it moves to a warmer, shadier area. Besides being able to change colors, the White's tree frog also tucks its feet and hands into its body to make it harder to detect predators. The Goliath Frog is the largest species of frog. It grows to over one foot (12.5 inches) long and weighs seven pounds. The Goliath Frog is found in West Africa. It can grow up to 15 inches in length and weigh seven pounds. Another species that can reach large sizes is the golden frog, or *PAEDOPHRYNE AMANUENSIS*. The frog's back legs are long and flexible. Poison dart frogs are the jewels of the rain forest.
