**Escaping Perpetual Insanity** Sep 04 2020 In December 1995, three leading members of what became known as the Essex Boys gang were lured to an isolated farm track in the village of Rettendon Essex. Two men, Mick Steele and Jack Whomes arranged the meeting which was supposedly to discuss a consignment of drugs that was being imported by light aircraft. The meeting, was in fact a trap. Whomes shot Craig Rolfe, Pat Tate and Tony Tucker when their Range Rover came to a halt in the lane. To fulfil his part of a gruesome pact, Steele also shot the stricken men. The murders made headline news. Nearly three decades on, more films have been made about the Essex

Boys than any other gang in British criminal history. Most people have now heard of them. However, the numerous newspaper articles, books and films have focused solely on Tucker, Tate, Rolfe and their murders. Few know little or indeed anything about the other gang members and what happened to them in the wake of the executions. Here, for the first time, ex-gang member and now best-selling author, Bernard O`Mahoney reveals the trials, tribulations and in some cases, the gruesome end of his former partners in crime. Some were murdered, others became murderers, few walked away unscathed. The story unfolds alongside O`Mahoney's own remarkable journey which is littered with violence, shocking tragedies, deep regret...but always hope.

*Practical Perpetual Calendars Jan 01 2023* Perpetual calendars are a fascinating way to look at time, and can be defined in a variety of ways. In a comprehensive how-to manual, James Saltvold shares valuable insight on how to use his unique concepts to make practical perpetual calendars for everyday home and office use. These calendars, which save resources and look like a conventional calendar, can be set to display any month for any year within their range. They are set by simply moving a slider, and typically have a range of 50 to 100 years. Saltvold uses skills he acquired during an engineering career to present design ideas and concepts for calendars that are easy to produce and use. After providing a brief description of the four types or categories that his calendars fit into, Saltvold leads readers on an informative journey, enhanced by figures and tables. He explains how to bring calendar prototypes into mass production, describes products that can be made from the four types of perpetual calendars, details which products might be attractive to various markets and manufacturers, and shares a brief history of his own work in developing concepts and researching patents. Additional sections include material on where to search for more information on perpetual calendars, as well as references with comments. *Practical Perpetual Calendars* includes designs for desk calendars, wall calendars, pocket calendars, photo holders, and other applications. The calendars shown on the front cover are described on the following pages: wall calendar (p. 129), clock (p. 77), pocket calendar (p. 68), full-year calendar (p. 157), 7-column desk calendar (p. 145), and 13-column desk calendar (p. 120).

Special Events Calendar Mar 23 2022 6 x 9 inches - A special little calendar to write in all your special occasions such as birthdays, anniversaries and special events that come around each year.

PERPETUAL CALENDAR FORMULA Jan 09 2021 This book is the author's attempt at explaining how he came up with a mental system of the calendar (Julian and Gregorian) which was later converted into a tangible prototype. Also attached herein is the author's design for a two – dimensional perpetual calendar for both systems that can be used to check the veracity of one's mental calculations. Likewise, the process by which the codes were assigned or derived were also explained to establish the periodic cycles in both calendar systems. The rules for leap years for both systems were similarly discussed to illustrate the apparent difference between the Julian and Gregorian Calendar. Surprisingly, the Perpetual Calendar Formula itself only involves the operations addition and modulo seven if the final answer is not within the range of the Day Codes. Subtraction is only done for the dates in January and February of a leap year. The ultimate goal is to be able to make the computations mentally and it requires memorization of the Codes for Days, Dates, Months, Years and Centuries as well as performing the correct addition and modulo application. With constant practice and active memorization, one can emerge as a human perpetual calendar.
