Chess Pattern Recognition for Beginners May 05 2020 One of the most effective ways to improve your chess Pattern recognition is one of the most important mechanisms of chess improvement. It helps you to quickly grasp the essence of a position on the board and find the most promising continuation. In his instant classics *Improve Your Chess Pattern Recognition* (2014) and *Train Your Chess Pattern Recognition* (2016) International Master Arthur van de Oudeweetering presented building blocks for experienced club players which often involved notable exceptions to a set of fundamental guidelines. To appreciate these books you had to know these basic principles. *Chess Pattern Recognition for Beginners* provides this knowledge. It teaches the most important patterns you need to know in order to develop and mobilize

your pieces, manoeuvre your pawns into positions of strength, put pressure on your opponent, attack the enemy king, and execute standard sacrifices to get the initiative. Ambitious beginners and post-beginners who study this book will soon experience a significant improvement in their results.

Engineering a Safer World Nov 10 2020 A new approach to safety, based on systems thinking, that is more effective, less costly, and easier to use than current techniques. Engineering has experienced a technological revolution, but the basic engineering techniques applied in safety and reliability engineering, created in a simpler, analog world, have changed very little over the years. In this groundbreaking book, Nancy Leveson proposes a new approach to safety—more suited to today's complex, sociotechnical, software-intensive world—based on modern systems thinking and

systems theory. Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept, and testing her new model extensively on real-world examples, Leveson has created a new approach to safety that is more effective, less expensive, and easier to use than current techniques. Arguing that traditional models of causality are inadequate, Leveson presents a new, extended model of causation (Systems-Theoretic Accident Model and Processes, or STAMP), then shows how the new model can be used to create techniques for system safety engineering, including accident analysis, hazard analysis, system design, safety in operations, and management of safety-critical systems. She applies the new techniques to real-world events including the friendly-fire loss of a U.S. Blackhawk helicopter in the first Gulf War; the Vioxx recall; the U.S. Navy SUBSAFE program; and the bacterial contamination of a public water supply in a Canadian town. Leveson's approach is relevant even beyond safety engineering, offering techniques for “reengineering” any large sociotechnical system to improve safety and manage risk.

Production Management Methods Aug 08 2020 National borders are becoming increasingly open for goods and ideas and this is creating challenges both for the industrialized countries and for the developing world. Most countries wish to keep and to grow their industries and this requires the design and operation of very complex systems in such a way as to maximize jobs, profits and the quality of life in general, under quite different conditions. An improved understanding of the distinct operations, variable trade offs - indeed quite individual conceptual models of manufacturing systems in different regions is therefore necessitated. This publication addresses various aspects involved in the achievement of the aim. It presents new developments in production management methods; tools for the evaluation of them; and assessments of the adequacy of different production management methods applied to various classes of production systems. Test cases and application statistics are analysed, thereby affording a comprehensive picture of the present situation and a vision for enhanced future

development.

Beyond Representation Jan 31 2020 Beyond Representation surveys Chinese painting and calligraphy from the eighth to the fourteenth century, a period during which Chinese society and artistic expression underwent profound changes. A fourteenth-century Yuan dynasty (1279 - 1368) literati landscape painting presents a world that is totally different from that portrayed in the monumental landscape images of the early Sung dynasty (960 - 1279). To chronicle and explain the evolution from formal representation to self-expression is the purpose of this book. Wen C. Fong, one of the world's most eminent scholars of Chinese art, takes the reader through this evolution, drawing on the outstanding collection of Chinese painting and calligraphy in The Metropolitan Museum of Art, New York. Focusing on 118 works, each illustrated in full color, the book significantly augments the standard canon of images used to describe the period, enhancing our sense of the richness and complexity of artistic expression during this six-hundred-year era.

An Introduction to Enterprise Architecture Sep 01 2022 An Introduction to Enterprise Architecture is the culmination of several decades of experience that I have gained through work initially as an information technology manager and then as a consultant to executives in the public and private sectors. I wrote this book for three major reasons: (1) to help move business and technology planning from a systems and process-level view to a more strategy-driven enterprise-level view, (2) to promote and explain the emerging profession of EA, and (3) to provide the first textbook on the subject of EA, which is suitable for graduate and undergraduate levels of study. To date, other books on EA have been practitioner books not specifically oriented toward a student who may be learning the subject with little to no previous exposure. Therefore, this book contains references to related academic research and industry best practices, as well as my own observations about potential future practices and the direction of this emerging profession.
