The Diario of Christopher Columbus's First Voyage to America, 1492-1493 Oct 25 2022 This definitive edition of Columbus's account of the voyage presents the most accurate printed version of his journal available to date. Unfortunately both Columbus's original manuscript, presented to Ferdinand and Isabella along with other evidence of his discoveries, and a single complete copy have been lost for centuries. The primary surviving record of the voyage-part quotation, part summary of the complete copy-is a transcription made by Bartolome de las Casas in the 1530s. This new edition of the Las Casas manuscript presents its entire contents-including notes, insertions, and canceled text-more accurately, completely, and graphically than any other Spanish text published so far. In addition, the new translation, which strives for readability and accuracy, appears on pages facing the Spanish, encouraging on-the-spot comparisons of the translation with the original. Study of the work is further facilitated by extensive notes, documenting differences between the editors' transcription and translation and those of other transcribers and translators and summarizing current research and debates on unanswered current research and debates on unanswered questions concerning the voyage. In addition to being the only edition in which Spanish and English are presented side by side, this edition includes the only concordance ever prepared for the Diario. Awaited by scholars, this new edition will help reduce the guesswork that has long plagued the study of Columbus's voyage. It may shed light on a number of issues related to Columbus's navigational methods and the identity of his landing places, issues whose resolution depend, at least in part, on an accurate transcription of the Diario. Containing day-by-day accounts of the voyage and the first sighting of land, of the first encounters with the native populations and the first appraisals of his islands explored, and of a suspenseful return voyage to Spain, the Diario provides a fascinating and useful account to historians, geographers, anthropologists, sailors, students, and anyone else interested in the discovery-or in a very good sea story. Oliver Dunn received the PH.D. degree from Cornell University. He is Professor Emeritus in Purdue University and a longtime student of Spanish and early history of Spanish America. James E. Kelley, Jr., received the M.A. degree from American University. A mathematician and computer and management consultant by vocation, for the past twenty years he has studied the history of European cartography and navigation in late-medieval times. Both are members of the Society for the History of Discoveries and have written extensively on the history of navigation and on Columbus's first voyage. Although they remain unconvinced of its conclusions, both were consultants to the National Geographic Society's 1986 effort to establish Samana Cay as the site of Columbus's first landing.

The Inflammation Spectrum Nov 02 2020 From the international bestselling author of Ketotarian comes a revolutionary new plan to discover the foods your unique body loves, hates, and needs to feel great. In Dr. Will Cole's game-changing new book, readers will discover how inflammation is at the core of most common health woes. What's more, it exists on a continuum: from mild symptoms such as weight gain and fatigue on one end, to hormone imbalance and autoimmune conditions on the other. How you feel is being influenced by every meal. Every food you eat is either feeding inflammation or fighting it. Because no one else is you, the foods that work well for someone else may not be right for your body. At heart, *The Inflammation Spectrum* is about learning to love your body enough to nourish it with delicious, healing foods. You'll find insightful quizzes and empowering advice to put you on a path toward food freedom and overall healing, once and for all.

The Diplomatic History of America: Its First Chapter 1452-1493-1494 Feb 05 2021

1493 Aug 23 2022 From the author of 1491—the best-selling study of the pre-Columbian Americas—a deeply engaging new history of the most momentous biological event since the death of the dinosaurs. More than 200 million years ago, geological forces split apart the continents. Isolated from each other, the two halves of the world developed radically different suites of plants and animals. When Christopher Columbus set foot in the Americas, he ended that separation at a stroke. Driven by the economic goal of establishing trade with China, he accidentally set off an ecological convulsion as European vessels carried thousands of species to new homes across the oceans. The Columbian Exchange, as researchers call it, is the reason there are tomatoes in Italy, oranges in Florida,

chocolates in Switzerland, and chili peppers in Thailand. More important, creatures the colonists knew nothing about hitched along for the ride. Earthworms, mosquitoes, and cockroaches; honeybees, dandelions, and African grasses; bacteria, fungi, and viruses; rats of every description—all of them rushed like eager tourists into lands that had never seen their like before, changing lives and landscapes across the planet. Eight decades after Columbus, a Spaniard named Legazpi succeeded where Columbus had failed. He sailed west to establish continual trade with China, then the richest, most powerful country in the world. In Manila, a city Legazpi founded, silver from the Americas, mined by African and Indian slaves, was sold to Asians in return for silk for Europeans. It was the first time that goods and people from every corner of the globe were connected in a single worldwide exchange. Much as Columbus created a new world biologically, Legazpi and the Spanish empire he served created a new world economically. As Charles C. Mann shows, the Columbian Exchange underlies much of subsequent human history. Presenting the latest research by ecologists, anthropologists, archaeologists, and historians, Mann shows how the creation of this worldwide network of ecological and economic exchange fostered the rise of Europe, devastated imperial China, convulsed Africa, and for two centuries made Mexico City—where Asia, Europe, and the new frontier of the Americas dynamically interacted—the center of the world. In such encounters, he uncovers the germ of today's fiercest political disputes, from immigration to trade policy to culture wars. In 1493, Charles Mann gives us an eye-opening scientific interpretation of our past, unequaled in its authority and fascination.

Oskar Schindler May 20 2022 Spy, businessman, bon vivant, Nazi Party member, Righteous Gentile. This was Oskar Schindler, the controversial savior of almost 12,000 Jews during the Holocaust who struggled afterwards to rebuild his life and gain international recognition for his wartime deeds. Author David Crowe examines every phase of the subject's life in this landmark biography, presenting a figure of mythic proportions that one prominent Schindler Jew described as "an extraordinary man in extraordinary times."

1493 for Young People Nov 26 2022 1493 for Young People by Charles C. Mann tells the gripping story of globalization through travel, trade, colonization, and migration from its beginnings in the fifteenth century to the present. How did the lowly potato plant feed the poor across Europe and then cause the deaths of millions? How did the rubber plant enable industrialization? What is the connection between malaria, slavery, and the outcome of the American Revolution? How did the fabled silver mountain of sixteenth-century Bolivia fund economic development in the flood-prone plains of rural China and the wars of the Spanish Empire? Here is the story of how sometimes the greatest leaps also posed the greatest threats to human advancement. Mann's language is as plainspoken and clear as it is provocative, his research and erudition vast, his conclusions ones that will stimulate the critical thinking of young people. 1493 for Young People provides tools for wrestling with the most pressing issues of today, and will empower young people as they struggle with a changing world.

The International Economy and Monetary Movements in France, 1493-1725 Jul 30 2020 This volume makes available the first English version of *L'conomie mondiale et les frappes monetaires en France, 1493-1680*, Frank C. Spooner's original and distinguished contribution to economic and monetary history. Generously illustrated with maps and graphs, and abridged by the author, this study introduces the English-reading audience to the methodological approaches of the modern school of French economic history. In this edition, Spooner covers an additional forty-five years not included in his original work: the period 1680-1725 which marks the prelude to the great monetary reform and consolidation of France in 1726. In addition to bringing the reader up to date on his continuing research, he presents a number of important conclusions concerning this economic era. Drawing from his vast insight into French monetary history and his thorough technical knowledge of French coinage and minds of the period, the author maps the historical and spatial perspectives of the two and a half centuries when France experienced successive periods of inflation as bullion, copper, and credit emerged into the forefront of economic affairs. To illustrate the way in which the sequence of these periods affected the structure of the French economy, he discusses how the relative supply and demand of the metals used in varying degrees as a medium of exchange increased the demand for the metal and influenced the credit system. Credit thus made a special contribution in coordinating and adjusting the various inconsistencies in the production and circulation of the different metals. Throughout his study, Spooner attributes an important role to money as a significant factor in economic change and development in early modern Europe and focuses on the relationship between the supply of money and the level and pattern of economic activity.

Cataloguing Discrepancies Aug 11 2021 Cataloguing Discrepancies reviews the description and cataloguing, from the early eighteenth century to the present day, of an early English Breviary, printed in 1493. With a critical eye, Andrew Hughes summarizes the work that has been done on this liturgical book, of which two complete copies and a number of fragments are extant. How these copies have been described - and more importantly how these accounts differ - is a central question of this volume. Based on the discrepancies and errors in the existing catalogues of medieval liturgical books, many of which repeat erroneous information for generations, the authors illustrate the defects, problems, and opportunities encountered when technologies of the fifteenth and the twenty-first centuries converge. Not only questioning existing bibliographical practices, Cataloguing Discrepancies suggests practical means for improvements to the future description of early printed books of this kind.

power 1830-70. -- V.11 Material progress and world-wide problems 1870-1898. -- V.12 The era of violence 1898-1945.

1493 Dec 27 2022 Two hundred million years ago the earth consisted of a single vast continent, Pangea, surrounded by a great planetary sea. Continental drift tore apart Pangaea, and for millennia the hemispheres were separate, evolving almost entirely different suites of plants and animals. Columbus's arrival in the Americas brought together these long-separate worlds. Many historians believe that this collision of ecosystems and cultures - the Columbian Exchange - was the most consequential event in human history since the Neolithic Revolution. And it was the most consequential event in biological history since the extinction of the dinosaurs. Beginning with the world of microbes and moving up the species ladder to mankind, Mann rivetingly describes the profound effect this exchanging of species had on the culture of both continents.

The Empress and the Heavenly Masters Jun 09 2021 Over twentyseven meters long, the Ordination Scroll of Empress Zhang (1493) is an important Ming Dynasty Daoist artifact from the San Diego Museum of Art's collection that records the imperial ordination of Empress Zhang (1470–1541), consort of the Ming Dynasty Hongzhi emperor (r. 1488–1505), by Zhang Xuanqing (d. 1509), the fortyseventh Heavenly Master of the Zhengyi institution. This book uncovers the history of imperial ordinations through a detailed examination of the scroll's transcriptions and the meticulously painted images of celestial beings, as well as the influences of the Daoist leaders known as the Zhengyi Heavenly Masters.
