The "History of Cambridge" was originally published in 1877. Besides the historical narrative in the first volume, the second volume contains a very full and carefully

compiled "Genealogical Register" of the early settlers and their descendants. These volumes are, in the most essential respects, models of what a town history should be. They contain the most important information obtainable from the sources then open to the author, and this is presented in a clear and concise narrative. In the estimation of those most competent to pass judgment, these volumes are authorities. But they are something more than authorities. They not only instruct; they inspire. Nobody deserves the privilege of growing up in this city who does not make himself familiar with these books. They are epitomes of the history, not only of this town, but of a good many other Puritan towns. It fills this place with memories of by-gone scenes and deeds which were precious to the people of those times, and are precious still to us, their descendants or successors. Gathers together previously published stories from one of the masters of science fiction Scientists and the Sea is a history of how the scientific study of the sea has developed over a period of nearly 2500 years. Beginning with the speculations of Greek philosophers it carries the story forward, showing how curiosity about the ocean appeared in many different forms and locations before, in the late 19th century, the first deep-sea researches heralded the foundation of the science known today as oceanography. Originally published in 1971, this book has never been superseded as the most comprehensive and wide-ranging treatment of the emergence of

marine science within the western scientific tradition. After three introductory chapters dealing with knowledge up to the Renaissance, the main part of the work shows how pioneers of scientific observation at sea during the 17th and 18th centuries made notable discoveries, but that it was not until the middle of the 19th century when, aided by the advance of technology, scientists were able to undertake the first explorations of the ocean depths. This second edition contains a new introduction and bibliography.

Robert Hooke was one of the most inventive, versatile and prolific scientists of the late 17th Century, but for 300 years his reputation has been overshadowed by those of his two great contemporaries, his friend Sir Christopher Wren and his rival Sir Isaac Newton. If he is remembered today, it is as the author of a law of elasticity or as amisanthrope who accused Newton of stealing his ideas on gravity. This book, the first life of Hooke for nearly fifty years, rescues its subject from centuries of obscurity and misjudgement. It shows us Hooke the prolific inventor, the mechanic, the astronomer, the anatomist, the pioneer of geology, meteorology and microscopy, the precursor of Lavoisier and Darwin. It also gives us Hooke the architect of Bedlam and the Monument, the supervisor of London's rebuilding after the Great Fire, the watchmaker, the consumer of prodigious quantities of medicines and purgatives, the candid diarist, the lover, the hoarder of money and secrets, the coffee house conversationalist. This is

an absorbing study of a fascinating and unduly forgotten man. This work focuses on the conception of God of the medieval Jewish philosopher and legal scholar, Hasdai Crescas (1340-1410/11). It demonstrates that Crescas' God is infinitely creative and good and explores the parallel that Crescas implicitly draws between God as creator and legislator. The French Jesuit Isaac-Joseph Berruyer's *Histoire du peuple de Dieu* was an ambitious attempt to connect the ideas of the Enlightenment with the theology of the Catholic Church. A paraphrase of the Bible written in vernacular French, the *Histoire* promoted progress, the pursuit of happiness, the fundamental goodness of humanity, and the capacity of nature to shape moral human beings. Berruyer aimed to update the Bible for a new age, but his work unleashed a furor that ended with the expulsion of the Jesuits from France. Berruyer's Bible offers a fresh perspective on the history of the Catholic Enlightenment. By exploring the rise and fall of Berruyer's *Histoire*, Daniel Watkins reveals how Catholic attempts to assimilate Enlightenment ideas caused conflicts within the church and between the church and the French state. Berruyer's Bible flips the traditional narrative of the Enlightenment on its head by showing that the secularization of French society and the political decline of the Catholic Church were due not solely to the external assaults of anti-clerical philosophes but also to the internal discord caused by Catholic theologians themselves. Built upon

extensive research in archives across Western Europe and the United States, Berruyer's Bible paints a vivid picture of the tumultuous intellectual world of the Catholic Church and the power of radical ideas that shaped the church throughout the Enlightenment, the French Revolution, and beyond. Presents short stories by five noted science fiction authors, including Robert Silverberg, David Brin, and Poul Anderson This first volume is particularly rich in matters of concern to the historian of science. It shows the young Newton in the plenitude of his powers; he himself wrote of the period at Woolsthorpe, which ended before any surviving letters of real consequence were written, 'for in those days I was in the prime of my age for invention, and minded Mathematics and Philosophy more than at any time since'. The main scientific topics with which these letters deal are the reflecting telescope; the early mathematical work; and the fundamental work on the decomposition of white light by the prism. Wanting to marry the love of his life, Isaac, a talented but poor artist, signs on for a voyage with a rich Captain to make some quick money, but the voyage turns into a series of adventures when the Captain turns out to be a pirate. The key aim of this book is to explore the global conservation and management of sharks. There has been a rapid decline in populations of many shark species, while new science has emerged of the critical role they play in marine ecosystems. However, the authors show that conservation law and

policy have been slow to develop, with only a small number of iconic species being protected worldwide. The increase in fishing impact – primarily through shark finning and by-catch - has led to shark conservation receiving greater international attention in recent years. The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their conservation and management. Recent trends are analysed, including shark finning bans that have been put in place in several countries, the widening number of nations establishing shark sanctuaries and the growth of shark-based tourism. The efficacy of current listing processes for endangered species and fisheries regulations is also examined. Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed. Contributors include leading authorities from universities and conservation organizations in North America, Europe and Australia. A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for inter-disciplinary research and management approaches that are necessary to address the decline in sharks. This volume, covering the years 1680 to 1684, documents the founding of Pennsylvania. The Vermont Brigade, sometimes referred to as the "First Vermont Brigade" or the "Old Brigade," fought its first full-brigade engagement in the Seven Days' battles. The

leaders, as well as the rank and file, were inexperienced in warfare, but through sheer grit and determination they made a name for themselves as one of the hardest-fighting units in the Army of the Potomac. Using soldiers' letters, diaries, and service and pension records, this book gives a soldier's-eye-view of the Virginia summer heat, days of marching with very little rest or nourishment, and the fear and exhilaration of combat. Also included are the stories of 29 men that were wounded or killed and how the tragedies affected their families. Henry Fynes Clinton's two-volume tabular history of the Roman Empire, first published in 1845 and 1850. "Remember, discover, become"--Title pages. "Historians of science, teachers and students of the history and philosophy of science and mathematics will be astounded at the difference a few decades of research has made in the assessment of Newton's work. Most heartily recommended to all who seek authoritative and readable glimpses of Newton at work".Choice, 2001 In Science Myths Unmasked Volume 2, David Rudel continues to expose common errors in science education. This sequel takes the discussion into the realm of physical science, rectifying commonly taught misconceptions about topics covered in chemistry and physics courses, including combustion, simple machines, states of matter, phase changes, electricity, and light. Rudel's accessible style makes Science Myths Unmasked a worthwhile read for life-long learners and a great gift for

bright high school students interested in all the myths they have been taught by inaccurate textbooks. State-adopted textbooks perpetrate (and perpetuate) a shocking degree of misinformation, largely because they are less interested in conveying accurate science than in training students to bubble in the right oval on multiple-choice, standardized tests. Rudel provides thorough background for each topic, empowering science teachers to sculpt the material to match the needs of their students. Numerous illustrations and suggested experiments complement the coverage, portraying precisely why many standard explanations are false and how we can better fulfill our obligation to provide genuine science to middle school and high school students. John Leland (1754-1841) was one of the most influential and entertaining religious figures in early America. As an itinerant revivalist, he demonstrated an uncanny ability to connect with a popular audience, and contributed to the rise of a democratized Christianity in America. A tireless activist for the rights of conscience, Leland also waged a decades-long war for disestablishment, first in Virginia and then in New England. Leland advocated for full religious freedom for all-not merely Baptists and Protestants-and reportedly negotiated a deal with James Madison to include a Bill of Rights in the Constitution. Leland developed a reputation for being mad for politics in early America, delivering political orations, publishing tracts, and mobilizing New England's

Baptists on behalf of the Jeffersonian Republicans. He crowned his political activity by famously delivering a 1,200-pound cheese to Thomas Jefferson's White House. Leland also stood among eighteenth-century Virginia's most powerful anti-slavery advocates, and convinced one wealthy planter to emancipate over 400 of his slaves. Though among the most popular Baptists in America, Leland's fierce individualism and personal eccentricity often placed him at odds with other Baptist leaders. He refused ordination, abstained from the Lord's Supper, and violently opposed the rise of Baptist denominationalism. In the first-ever biography of Leland, Eric C. Smith recounts the story of this pivotal figure from American Religious History, whose long and eventful life provides a unique window into the remarkable transformations that swept American society from 1760 to 1840. Isaac's Fear is a wide-ranging study of a Hebrew encyclopedia of Judaism by Isaac Lampronti, a rabbi and physician from eighteenth-century Ferrara, in Italy; this is the first encyclopedia of Judaism, with entries on thought and praxis. The book's eight chapters are previously published studies. Isaac's Fear represents the attempt to synthesize modern science and religious tradition, a fundamental issue then and in our own day. Encyclopedia entries illuminate the society and culture of early modern Italy, its Jewish community and the intellectual life of the author and his contemporaries. Gathers together previously published stories from one

of the masters of science fiction them in his cheat-preface to Copernicus *De Revolutionibus*, but the main change in their import has been that whereas Osiander defended Copernicus, Mach and Duhem defended science. The modern conception of hypothetico deductive science is, again, geared to defend the respectability of science in much the same way: the physical interpretation, it says, is merely and always hypothetical, and so the scientist is never really committed to it. Hence, when science sheds the physical interpretation off its mathematical skeleton as time and refutation catch up with it, the scientist is not really caught in error, for he never was committed to this interpretation in the first place. This is the apologetic essence of present day, Popper-like, versions of the idea of science as a mathematical-core-cum-interpretational shell. This is also Cohen's view, for it aims to free Newton of any existential commitment to which his theory might allegedly commit him. It will be readily seen that Cohen regards this methodological distinction between mathematics and physics to be the backbone of the Newtonian revolution in science (which is, in its turn, the climax of the whole Scientific Revolution) for a very clear reason: it enables us to argue that Newton could use freely the new concept of centripetal force, even though he did not believe in physical action at a distance and could not conceive how such a force could act to produce its effects". ([3] pp. This book is one of four

substantial volumes designed to demonstrate the range of interests of the several Protestant Nonconformist traditions from the time of their Separatist harbingers to the end of the twentieth century. In this volume we are concerned with the eighteenth century. It was a period in which Old Dissent--the Congregationalists, Baptists, Presbyterians, and Quakers--had to face challenges from Enlightenment thought on the one hand and Evangelical Revival enthusiasm on the other. Largely in their own words, though with introductions contributed by the editors, we enter into the philosophical world of Isaac Watts, Richard Price, and others; we overhear doctrinal disputes over the doctrine of the Trinity; we meet such new arrivals on the religious scene as the Moravians, Sandemanians, Swedenborgians, and Methodists (Calvinistic and Arminian). We consider the Nonconformists' views on the Church, the ministry, and the sacraments; on Church, state, and society; and on Christian nurture, piety, and church life. From philosophical tomes to hymns, from sacramental questions to prison reform, from the most strait-laced Presbyterian to the most enthusiastic Jumper, this volume will remind scholars of the intellectual excitements, the practical witness, and the worship of the eighteenth-century Nonconformists. Presents short stories by noted science fiction authors, including Poul Anderson, Hal Clement, Harry Turtledove, Karen Haber, and Janet Kagan MDP Publishing has compiled a second collection of

Novels, novelettes, novellas and short stories from prolific Science Fiction icon Isaac Asimov. These stories were originally published by Galaxy Science Fiction Magazine in the late 1950's. Stories include the 3 part full length novel Caves of Steel, as well as Lastborn, Galley Slave and Ideas Die Hard. With over 250+ electronic pages and all of the originally artwork from each issue of Galaxy, you can experience these stories the same way science fiction fans from the 1950's did! Look for more editions of MDP's Galaxy's Science Fiction series, available now at e-retailers worldwide. Presents Newton's investigations into the nature of color and refraction and describes his theory that sunlight is made up of rays of different colors The reports for 1861-1865 are reprinted in full, except for the omission of the lists of officers and the lists of losses of the various organizations, which are reprinted in separate form.
