Learners, Learning and Educational Activity
Jul 20 2021 Offers a creative approach to the
psychology of learning. This book focuses on
the idea that learning in schools and other
educational settings is best understood by
paying attention to both individual learners
and the educational contexts in which learning
takes place. It encourages teachers, parents
and other educators to think about learners.

Tactile Learning Activities in Mathematics
Apr 28 2022 Q: What do feather boas, cookies,
and paper shredders have in common? A: They
are all ingredients that have the potential to

help your undergraduate students understand a variety of mathematical concepts. In this book, 43 faculty from a wide range of institutional settings share a total of 64 hands-on activities that allow students to physically engage with mathematical ideas ranging from the basics of precalculus to special topics appropriate for upper-level courses. Each learning activity is presented in an easy-to-read recipe format that includes a list of supplies; a narrative briefly describing the reasons, logistics, and helpful hints for running the activity; and a page that can be used as a handout in class.

Purchase of the book also includes access to electronic printable versions of the handouts. With so many activities, it might be hard to decide where to start. For that reason, there are four indices to help the reader navigate this book: a concept index, a course index, an [Author]; index, and a main ingredient index.

In addition to providing activities for precalculus, calculus, commonly required mathematics courses for majors, and more specialized upper-level electives, there is also a section describing how to modify many of the activities to fit into a liberal arts mathematics class. Whether you are new to using hands-on activities in class or are more experienced, the [Author];s hope that this

book will encourage and inspire you to explore the possibilities of using more hands-on activities in your classes. Bon appetit!

Learning Activities from the History of Mathematics Jun 18 2021 Biographies of 23 important mathematicians span many centuries and cultures. Historical Learning Tasks provide 21 in-depth treatments of a variety of historical problems.

Learning as a Generative Activity Apr 16 2021
This book presents eight evidence-based strategies that promote generative learning, which enables learners to apply their knowledge to new problems.

Teaching and Learning in the Digital Age Apr
04 2020 Teaching and Learning in the Digital Age is for all those interested in considering the impact of emerging digital technologies on teaching and learning. It explores the concept of a digital age and perspectives of knowledge, pedagogy and practice within a digital context. By examining teaching with digital technologies through new learning theories cognisant of the digital age, it aims to both advance thinking and offer strategies for teaching technology-savvy students that will enable meaningful learning experiences. Illustrated throughout with case studies from across the subjects and the age range, key issues considered include: how young people

create and share knowledge both in and beyond the classroom and how current and new pedagogies can support this level of achievement the use of complexity theory as a framework to explore teaching in the digital age the way learning occurs – one way exchanges, online and face-to-face interactions, learning within a framework of constructivism, and in communities what we mean by critical thinking, why it is important in a digital age, and how this can occur in the context of learning how students can create knowledge through a variety of teaching and learning activities, and how the knowledge being created can be shared, critiqued and evaluated. With an emphasis throughout on what it means for practice, this book aims to improve understanding of how learning theories currently work and can evolve in the future to promote truly effective learning in the digital age. It is essential reading for all teachers, student teachers, school leaders, those engaged in Masters' Level work, as well as students on Education Studies courses.

Activity Theory and Collaborative Intervention in Education May 30 2022 By

applying cultural-historical activity theory and expansive learning theory to educational research, this volume illuminates new forms of educational activities as collaborative interventions in schools and communities where learners and practitioners generate expansive learning so that they can collectively transform their activities and expand their agency for themselves. It covers four cases of activity-theoretical formative intervention studies conducted in Japan, which are related to: fostering children's expansive learning in classroom lessons; teachers as collaborative change agents in redesigning schools; expanding the school activity from below; and emerging knotworking agency in community-based disaster prevention learning. This book employs activity theory as a general theoretical framework of human learning and development to connect focal data from empirical and interventional studies on real human learning in specific educational settings in Japan. In this way, the book illustrates how the general theoretical framework could be used to understand a specific socio-cultural milieu, that is, the Japanese context. It also shows the universal relevance of the Japanese context of educational activity on broader international research, analyzing concrete empirical data

from specific settings in Japan. In conclusion this book creates new understanding and develops a cohesive framework of the agentic and hybrid nature of educational activities as collaborative interventions in the expansion of learning.

Sociocultural Psychology and Regulatory Processes in Learning Activity Jun 30 2022
Through the use of new analytical tools, this book presents a dynamic, sociocultural view of behavioural regulation in learning contexts.

Activity Theory in Practice Mar 16 2021 This ground-breaking book brings together cutting-edge researchers who study the transformation of practice through the enhancement and transformation of expertise. This is an important moment for such a contribution because expertise is in transition - moving toward collaboration in inter-organizational fields and continuous shaping of transformations. To understand and master this

transition, powerful new conceptual tools are needed and are provided here. The theoretical framework which has shaped these studies is Cultural Historical Activity Theory (CHAT). CHAT analyses how people and organisations learn to do something new, and how both individuals and organisations change. The theoretical and methodological tools used have their origins in the work of Lev Vygotsky and A.N. Leont'ev. In recent years this body of work has aroused significant interest across the social sciences, management and communication studies. Working as part of an integrated international team, the authors identify specific findings which are of direct interest to the academic community, such as: the analysis of vertical learning between operational and strategic levels within complex organizations; the refinement of notions of identity and subject position within CHAT; the introduction of the concept of 'labour power' into CHAT; the development of a method of analysing discourse which theoretically coheres with CHAT and the design of projects. Activity Theory in Practice will be highly useful to practitioners, researchers, students and policy-makers who are interested in conceptual and empirical issues in all aspects of 'activity-based' research.

Activity Systems Analysis Methods Sep 09 2020
In the last two decades, there has been growing interest in pursuing theoretical paradigms that capture complex learning situations. Cultural Historical Activity Theory (CHAT) is one of several theoretical frameworks that became very popular among educational researchers because it conceptualizes individuals and their environment as a holistic unit of analysis. It assumes a non-dualistic ontology and acknowledges the complexities involved in human activity in natural settings. Recently, reputable journals such as the American Psychologist, Educational Psychologist, and Educational Researcher that are targeted for a wide-range of audience have included articles on CHAT. In many of such articles, CHAT has

been referred to as social constructivism, sociocultural theory, or activity theory. Activity systems analysis is one of the popular methods among CHAT researchers for mapping complex human interactions from qualitative data. However, understanding the methods involved in activity systems analysis is a challenging task for many researchers. This difficulty derives from several reasons. First the original texts of CHAT are in Russian and there have been numerous authors who report on the difficulties of reconciling translation problems of the works of original authors' such as Vygotsky and Leontiev. Second, in North America activity systems analysis has deviated from the Russian scholars' intentions and Engeström's original work using the triangle model to identify tensions to overcome and bring about sociopolitical change in participant practices. Third, to this date there are numerous publications on the theoretical background of activity theory and studies reporting the results of using activity systems analysis for unpacking qualitative data sets, but there have been no methodological publications on how researchers engage in activity systems analysis. Thus, there is a dearth of literature in both book and journal publications that guide

researchers on the methodological issues involving activity systems analysis.

Priddy Learning: My First Let's Spell

Oct 30

2019 Priddy Learning: My First Let's Spell is a new learning format from Priddy Books including an alphabet flip-chart and a lift-the-flap board book. It is perfect for helping young children learn to recognize and spell three-letter words. The activities in the 16-page workbook are designed towards teaching children aged three and over how to spell simple three-letter words. The exercises in the book increase in difficulty, and help children to recognize sound placement in CVC words. The board book has flaps to lift, so children can check their answers. The attached flip-chart can be used to help work out how to spell words through letter recognition, and also has a fun picture-word matching game. The book and chart are packaged in a sturdy case, so can be taken on trips

Activity Learning Sep 21 2021 Defines the notion of an activity model learned from sensor data and presents key algorithms that form the core of the field Activity Learning: Discovering, Recognizing and Predicting Human Behavior from Sensor Data provides an in-depth look at computational approaches to activity learning from sensor data. Each chapter is constructed to provide practical, step-by-step information on how to analyze and process

sensor data. The book discusses techniques for activity learning that include the following: Discovering activity patterns that emerge from behavior-based sensor data Recognizing occurrences of predefined or discovered activities in real time Predicting the occurrences of activities The techniques covered can be applied to numerous fields, including security, telecommunications, healthcare, smart grids, and home automation. An online companion site enables readers to experiment with the techniques described in the book, and to adapt or enhance the techniques for their own use. With an emphasis on computational approaches, Activity Learning: Discovering, Recognizing, and Predicting Human Behavior from Sensor Data provides graduate students and researchers with an algorithmic perspective to activity learning.

Emerging Technologies Mar 28 2022 Although emerging technologies are becoming popularised for teaching, learning and research, the relationship between their use and transformative effects on higher education remain largely unexplored. This edited collection seeks to fill this gap by providing a nuanced view, locating higher education pedagogical practices at an intersection of emerging technologies, authentic learning and activity systems. Providing numerous case studies as examples, the book draws from a wide range of contexts to illustrate how such a convergence has the potential to track transformative teaching and learning practices in the higher education sector. Chapters provide the reader with a variety of transformative higher education pedagogical practices in southern contexts, theorised within the framework of Cultural Historical Activity Theory (CHAT) and tool mediation, while using authentic learning as a pedagogical model upon which this theoretical framework is based. The topics covered in the book have global relevance, with research paying particular attention to South Africa, Australia and New Zealand, where the authors are based. The book will be of interest to educators, researchers and practitioners in higher education, as well as those interested

in emerging technologies in education more generally.

The Ultimate 1 Year Old Activity Book Jan 02 2020

Collaborative Active Learning Jun 06 2020
This book discusses activity-based collaborative active learning (CAL) approaches in connection with the learning and teaching of STEM and non-STEM disciplines. It also covers feedback and assessment activities as learning activities supported by learning technologies and applied in appropriate learning spaces. The contributing authors discuss in detail the implementation and facilitation of activity-based CAL strategies, the problems encountered and corresponding mitigation measures. In addition, all activities are developed in a blended mode, making them suitable for readers at any level of education who are interested in trying out CAL. Covering both STEM and non-STEM disciplines, this book offers comprehensive guidelines for lecturers who are interested in active learning.

Learning on Your Feet Dec 25 2021 In this much-needed book, you'll learn how incorporating physical activity into the classroom can improve students' engagement, achievement, and overall wellness. Students typically spend most of the day sitting at

their desks, and many don't have recess or PE, yet research shows that regular exercise helps stimulate brain function and improve skills such as reading, critical thinking, organization, and focus. Authors Brad Johnson and Melody Jones, who have consulted with schools across the globe on fitness issues, offer a variety of games and activities you can use to integrate exercise into any class or subject area. You'll learn how to: Create an "active classroom" with active workstations and fitness areas to keep students alert and engaged throughout the day; Gradually introduce physical activities into your everyday classroom routine; Use interactive technology to teach your students about health and fitness; Try out a variety of activities and exercises to reduce stress, help students focus, promote teamwork, build core strength and balance, and more; Make STEM classes more exciting with hands-on activities, projects, and real-world problems, all while getting your students up and moving. These activities are easy to implement and are designed to improve one's physical and mental capabilities, as well as increase enjoyment of learning for happier, healthier, higher-achieving students.

Learning and Expanding with Activity Theory
Aug 21 2021 There is a growing interest in

activity theory across behavioral and social sciences. Activity theory has a very rich and solid heritage in the works of Vygotsky, Luria, and Leont'ev. The development of activity theory depends on the understanding of this heritage. However, this literature is very demanding and often proves inaccessible to new generations of scholars who want to pursue empirical studies. How can students and young researchers be helped to engage with this heritage as they carry out their inquiries in various social practices? This book provides researchers with an accessible text that also supports the use of the classic tradition of activity theory.

Learning and Collective Creativity _____ May 18
2021 This book brings together leading representatives of activity-theoretically-oriented and socioculturally-oriented research around the world, to discuss creativity as a collective endeavour strongly related to learning to face the societal challenges of our world. As history shows, major accomplishments in arts and technological innovations have allowed us to see the world differently and to identify new learning perspectives for the future which were seldom limited to individual action or isolated activities. This book, while primarily focused on educational insitutions, extends its

examination of creativity and learning to include other settings (such as government agencies) beyond the limits of schooling.
